

TEMESA adds new technologies to improve further smart city requirements with LF 12 IBUS.

Announcing in January 2015 press conference at Sabancı Holding, TEMSA plans to launch its first smart city bus, LF 12 IBUS. This new vehicle is to be launched during Busworld 2015 exhibition in Kortrijk, Belgium. Onboard technology on LF 12 IBUS contains the necessary telecommunications and information technology infrastructure to handle the smart city needs.

During the past years Turkish commercial vehicle manufacturer, TEMSA, has done significant investment in adding to its R&D capabilities as a manufacturer of wide range of commercial vehicles. As a market leader in urban transportation in domestic market, TEMSA decided to take a leadership role in intelligence transportation to improve public transit accessibility, safety, reliability and predictability.

LF 12 IBUS with is equipped with a combination of modern electronics that allows the bus to send, receive and broadcast digital information with passengers and services.
